

# WinDyn5i

Performance Software Packages offer seamless integration with dynamometer equipment and data acquisition software, providing an end-to-end solution. These packages are designed with the flexibility to tailor functionalities to your specific needs and applications, ensuring optimal performance. Enhancement packages further support your testing experience by offering post-sale service, support, parts, training, and software editing capabilities.

Our Performance Software Packages deliver the proven capabilities of the legacy WinDyn system on a modern platform. WinDyn5i integrates software, components, and hardware to support your needs today and into the future—helping you streamline operations and grow your business.

## WinDyn5i Lite

The WinDyn5i Lite package includes all necessary hardware and offers a simple, reliable solution for basic dynamometer operation. It features a standard dyno setup with factory test profiles and reports, making it ideal for essential testing and calibration. While it covers core functions, some advanced control features are limited or disabled.

This package is ideal for users seeking an easy-to-use system for standard testing. It includes basic technical support, startup and commissioning, limited on-site training, preventative maintenance, and subscription renewal reminders.

## WinDyn5i Standard

The WinDyn5i Standard package offers a user-friendly, customizable interface, making it easy for operators to calibrate and test parameters for optimal dynamometer performance. Designed for standard users, it includes channel and screen editing tools to support accurate, repeatable results.

It also features CAN functionality, including a CAN editor and the ability to configure additional CAN channels for enhanced data analysis and reporting. This package is ideal for users who want powerful editing tools without the complexity of advanced systems.

Additional benefits include priority technical support, basic startup and commissioning, limited on-site training, parts rebates, and predictive maintenance and subscription renewal reminders.

## WinDyn5i Advanced

The Advanced WinDyn5i package delivers powerful, user-configurable tools for data acquisition experts. With advanced capabilities and a user-friendly interface, it provides robust editing tools that allow operators to modify, customize, and fine-tune test parameters to meet evolving testing needs.

Building on the Lite and Standard packages, this option is ideal for experienced users who require intuitive editing tools for precise and reliable testing. It includes advanced CAN functionality, configurable channels, and software expansion options to support accurate, repeatable results.

This package offers **valuable additional benefits**, including discount on annual on-site preventative maintenance service and software training. It also provides priority technical support, advanced startup and commissioning, advanced on-site training, parts rebates, and predictive maintenance and subscription renewal reminders.

If the Standard or Advanced packages are canceled or not renewed, the system will revert to WinDyn5i Lite.

# Subscription Package Comparison

**Dynamometer must have internet connection to perform software installs, updates and online services.**

	Software Features	Lite	Standard	Advanced
Test Controls	Offsite system back up at time of software updates	✓	✓	✓
