

# ASC Electronic Shift Console

ASC Shift Console shown

## Overview

The ASC Electronic Shift Console is a programmable transmission shift cart that has been designed especially for non-dealer service centers that require the ability to exercise multiple transmissions outside of the vehicle in conjunction with the Power Test family of transmission test stands during testing.

ASC Electronic Shift Console:

- Easily switches between customer specified Shift Profiles using the touch-screen computer.
- Eliminates the expense and need for multiple TCU's.
- Performs solenoid tests.
- Plugs into standard 110 VAC power source and provides 12 VDC or 24 VDC (vehicle dependant) power supply.
- Does not require an OEM TCU for reprogramming.
- Shift Profile(s) and test harnesses are ordered separately to match your testing needs.
- Kits are available for several transmission models including; Allison, GM, Ford and ZF.

Because of the large variety of transmission configurations, the ASC Electronic Shift Console has been designed to cost effectively upgrade Shift Profiles and testing harnesses without the need of console hardware upgrades in most cases.
